PHYSICIAN SCHEDULING

A flexible solution that simplifies scheduling and improves clinician autonomy

Petal Health's Physician Scheduling Solution enables administrators and physicians to manage schedules, which saves planning time, ensures fairer schedules, and helps reduce administrative burden.

Key benefits of the Physician Scheduling Solution

Save time planning and managing schedules

Templates and pre-configured rules make scheduling simple and fast for planners and physicians. Easily see where the gaps are, fill with physicians that are available and have the skill set required.

Keep your entire team on the same page

Up-to-date schedules are available to the group members from their mobile device, tablet, or desktop, preventing confusion and eliminating the need to keep a spreadsheet updated and circulated.

Support a balanced workload and combat burnout

Ensure an equitable distribution of shifts accounting for individual preferences, work contracts and other variables such as complexity of a procedure.
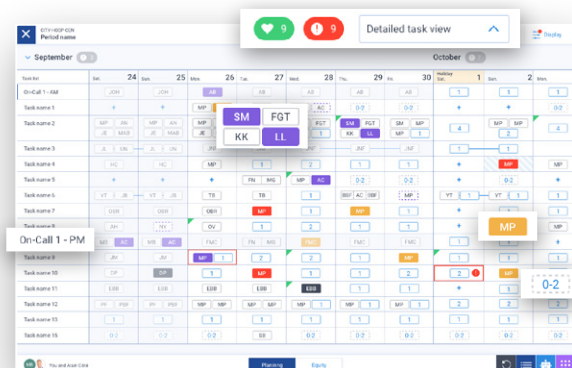

Allow your organization to scale

Petal Health's platform can be adapted and scaled for any type of healthcare setting, medical specialty, or hospital health network.

Give physicians autonomy over their schedules

Physicians can manage their own schedules, request leave time, and swap shifts with colleagues from the web or a mobile app – without going through administration.

Enable planners and care teams to collaborate on scheduling for greater efficiency and job satisfaction
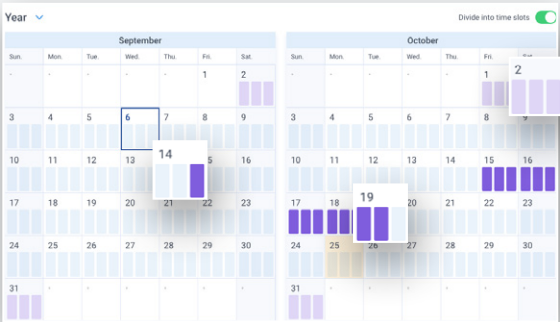

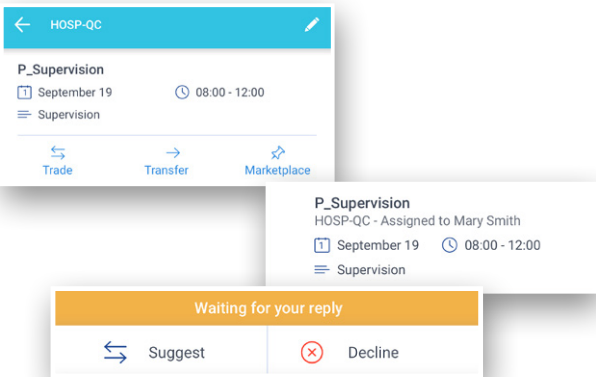

Rule-based planning

Create balanced and professionally accurate schedules with predetermined rules and preferences such as clinical task complexity, pre-existing contracts, physician expertise and more variables.

Shift trade and transfer

Care providers can transfer or trade shifts with their peers directly or by posting on a virtual billboard. Administrators can also approve those changes before they're made.

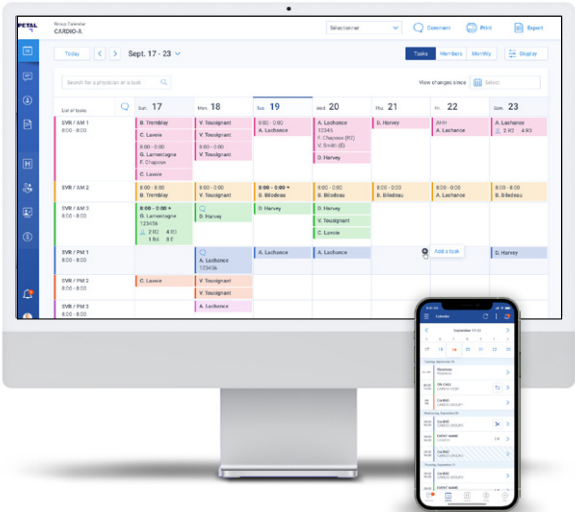

Absence management

Physicians can communicate when they are unavailable (e.g. holidays, unforeseen events). Planners can manage all requests in one place and adjust for shift coverage accordingly.

Group calendar

Your team's entire schedule is accessible from any computer, tablet or mobile device via a mobile app. Changes are automatically updated and care team members can view details of assigned shifts in real time.

Equity counter

Set medical service rules, team member constraints and preferences. As schedules are being planned, they are measured against the "weight" of each task or shift (e.g., account night/weekends, holidays, more demanding periods) to highlight equity breaks.

Phys.	Total shift	Total shift WKD	Total shift Week	NIGHT WKD	NIGHT Week	DAY WKD	DAY Week	EYE WKD	EYE Week
Anderson (AA)	70	22	48	6	12	8	17	8	19
